1. What is the main topic of my PDF?

Your PDF is about an **AI Personal Study Assistant**, a chatbot that uses uploaded study materials to help students learn, revise, and practise for exams. Its sample subject is **Python fundamentals**.

2. Explain the first topic in simple words

The first topic is Introduction. It explains that the AI Personal Study Assistant helps students understand lessons and prepare for exams. A student uploads a study PDF, then asks the chatbot questions about it. The chatbot can explain ideas, summarize sections, and create practice questions using the uploaded material.

3.Give me a short summary of the PDF.

The PDF introduces an AI Personal Study Assistant that answers questions from uploaded study materials and supports revision and quizzes. It uses Python fundamentals as its example, covering variables, input and output, operators, conditions, loops, functions, and basic algorithms. It also shares study and chatbot setup tips, practice questions, and reminders to verify AI answers against the original notes.

Hope that helps with your revision!

4.List five important points.

1. The assistant answers questions using an uploaded study PDF.
2. Python basics include variables, data types, input/output, and operators.
3. `if` statements make decisions, loops repeat code, and functions reuse code.
4. Algorithms solve problems through clear, step-by-step instructions.
5. Students should practise recalling information and check AI answers against their notes.

5.Give me five multiple-choice questions.

1. Which Python function displays output on the screen?
   A. `input()`
   B. `print()`
   C. `type()`
   D. `range()`
2. What is the result of `10 % 3` ?
   A. 0
   B. 1
   C. 3
   D. 3.3
3. Which keyword is used to define a function in Python?
   A. `loop`
   B. `function`
   C. `def`
   D. `return`

4. What does an `if` statement do?
   A. Repeats code forever
   B. Checks a condition
   C. Saves a file
   D. Imports a module
5. What numbers are produced by `range(1, 4)` ?
   A. 1, 2, 3
   B. 1, 2, 3, 4
   C. 0, 1, 2, 3
   D. 4 only

Answer key: 1. B, 2. B, 3. C, 4. B, 5. A.

6.Explain one concept with an example.

A loop repeats a block of code. For example, a `for` loop can print each number from 1 to 3:

```
for i in range(1, 4):

    print(i)
```

It prints:

```
1

2

3
```

```
7.Prepare short revision notes.
```

- AI Personal Study Assistant: A chatbot that answers questions using an uploaded study PDF and helps with summaries, revision, and quizzes.
- Python basics: Variables store values. Common data types include integers, floats, strings, and booleans.
- Input and output: `input()` reads information; `print()` displays it.
- Operators: Perform calculations, such as `+` , `-` , `*` , `/` , `//` , `%` , and `**` .
- Conditions: `if` , `elif` , and `else` let a program make decisions.
- Loops: `for` and `while` repeat code. In `range(1, 4)` , the numbers 1, 2, and 3 are produced.
- Functions: Defined with `def` , functions are reusable blocks of code. `return` sends back a result.
- Algorithms: Clear, step-by-step instructions for solving a problem.
- Revision tips: Summarize topics, practise recalling information, answer questions, and review mistakes.

- Responsible AI use: Check answers against the notes, avoid uploading private information, and treat AI as a learning aid.

8.Compare two topics from my PDF.

Loops vs. Functions

Loops	Functions
Repeat a block of code.	Package reusable code that performs a task.
Use `for` or `while`.	Defined with `def`.
Example: print numbers 1 to 3 using `for i in range(1, 4)`.	Example: `add(a, b)` returns the sum of two values.

In short: A loop repeats instructions, while a function lets you organize and reuse instructions.

9.Ask a question whose answer is not in my PDF.

2024

10. Ask an unrelated question and observe the answer.

Question: What is the capital of France?

Answer: That information isn’t covered in your PDF.
